KiwiSaver Survey September Quarter 2014

All markets experienced growth during the third quarter of 2014, with the best performing sectors coming from outside New Zealand. This illustrates the importance of a well-diversified portfolio as those with a domestically focused KiwiSaver Scheme will have lagged.

Tim Murphy | 22-October-14 |

Morningstar's quarterly KiwiSaver Survey is designed to help New Zealand investors assess the performance and other key characteristics of their KiwiSaver superannuation options. The accompanying tables show KiwiSaver fund returns for the one, three and five years to 30 September 2014.

This quarter we added the Kiwi Wealth KiwiSaver Scheme, six Grosvenor and two Westpac KiwiSaver funds to our database, meaning we now include all of the default providers.

We hope you find this KiwiSaver survey helpful and, as always, welcome any feedback.

Market Overview

The September quarter proved beneficial for investors, but the journey was far from smooth. The world was rocked by the shooting down of flight MH17 in eastern Ukraine and the radical actions of ISIS in its attempt to dominate the Middle East. Scotland came close to becoming an independent country and the busy streets of Hong Kong temporarily came to a halt as activists pressed for greater independence from Beijing.

The divergence between the eurozone and U.S. economies was accentuated during the quarter. Improving economic readings in the U.S. have given the Federal Reserve confidence to wind down its quantitative easing program, while deteriorating economic conditions forced the European Central Bank (ECB) to step up its monetary policy actions. Deflation worries and cracks appearing in the usually resilient German economy have sparked fears that the bloc will slip back into recession.

A positive earnings season in New Zealand helped support the market's relatively expensive valuation. However, growth expectations have cooled as commodity prices have fallen sharply and economic data has become less positive. The Reserve Bank (RBNZ) raised the cash rate to 3.5% in July and expectations are that it will remain at that level until next year. A compelling National Party election victory at the end of the quarter provided a boost for the NZX.

The RBNZ intervened with the currency and it subsequently fell sharply against the US\$ during the period and provided a significant tailwind for market returns if left unhedged. The NZ\$ fell 11.4% to US78¢ from US88¢. Market returns from across the

Tasman were also enhanced as the NZ\$ fell 3.7% to A89¢ from A92¢.

That sharp depreciation meant that all major stock markets produced positive returns in NZ\$ terms for the September quarter. Global markets in aggregate were up 10.12%. Within this, the US market (S&P 500) rose 13.60%, the UK market (FTSE) gained 5.55% and the Japanese market (Nikkei) increased 10.66%. Across the Tasman, the S&P/ASX 200 returned 3.52% but without the currency-driven gains the story at home was much more subdued. The NZX 50 edged up 2.21%. However, after a strong start to the year, it was up nearly 11% for the year to 30 September.

Listed property tempered following its rally in the first half of the year, Global listed property decreased 1.04% if hedged (7.67% increase in NZ\$), while domestic listed property finished 3.01% higher.

Bond yields around the world continued to fall amid global economic worries and the ECB stepping up its monetary policy actions. The global Barclays Aggregate Bond index rose 12.71% in NZ\$ terms, 2.03% if hedged. The local yield curve flattened amid lessening inflationary pressure and global bond movements. The local composite fixed income index posted a 1.83% return.

Fund Manager Results

Investors were well rewarded during the quarter as all asset classes experienced growth. The active decision to allocate more capital to growth assets continued to prove beneficial for investors. This is best represented by the correlation between the average returns for the five categories and their respective weightings to growth assets. The aggressive category returned an impressive 3.84% on average and the conservative category was the weakest, returning 1.88% on average. Pleasingly for investors, all KiwiSaver schemes on our database had a positive quarter.

There were no standout performers across the categories, though Milford KiwiSaver deserves credit for topping the league tables in the balanced and moderate categories and ASB KiwiSaver for posting a solid performance across the board. In the single sector space, OneAnswer KiwiSaver was very strong in the international equities category.

It is more appropriate to evaluate the performance of a
KiwiSaver scheme by studying its long-term returns. Aon
KiwiSaver Russell is the most notable performer as it is at or
near the top across all five categories. ANZ KiwiSaver
continues to be the strongest of the default providers across the
board. Greater international exposure than peers has meant Kiwi
Wealth KiwiSaver has comfortably been the strongest
performer in the aggressive category over the past three years.

The strongest-performing fund in the September quarter was **OneAnswer KiwiSaver Sustainable Growth**, which returned an impressive 8.77%. The strongest-performing fund over the long term is **OneAnswer KiwiSaver International Property**, which returned 14.44% annually to investors over the past five years.

Don't Forget About Tax

Taxation is relatively simple for KiwiSaver investors, who simply pass on their personal tax rates to their providers which then take care of it. However, not all investments are subject to tax and some parts of the market are significantly more tax-efficient than others. For example, capital gains tax is not charged on New Zealand and Australian shares, whereas international shares are treated differently and typically will pay more tax. Other factors that can affect the tax paid include fees and the impact of foreign exchange.

We use a proprietary Tax Cost Ratio to measure the effect of tax. This represents how much a fund's annualised return is reduced by taxes the investors pay. A lower ratio represents less tax paid by investors and therefore improved after-tax performance.

Any general advice or 'class service' have been prepared by Morningstar Australasia Pty Ltd (ABN: 95 090 665 544, AFSL: 240892) and/or Morningstar Research Ltd, subsidiaries of Morningstar, Inc, without reference to your objectives, financial situation or needs. Refer to our Financial Services Guide (FSG) for more information at www.morningstar.com.au/s/fsg.pdf. Vou should consider the advice in light of these matters and if applicable, the relevant Product Disclosure Statement (Australian products) or Investment (New Zealand products) before making any decision to invest. Our publications, ratings and products should be viewed as an additional investment resource, not as your sole source of information. Past performance does not necessarily indicate a financial product's future performance. To obtain advice tailored to your situation, contact a professional financial adviser. Some material is copyright and published under licence from ASX Operations Pty Ltd ACN 004 523 782 ("ASXO").

The table below gives an indication of how returns are affected by taxes and the differences between providers.

	5y pre-tax	5y post-tax	Tax Cost
Name	return (%pa)	return (%pa)	Ratio (%)
AMP KiwiSaver LS Balanced	7.77	5.96	1.68
ANZ Default Balanced	8.44	6.75	1.56
ASB Scheme's Balanced	8.45	6.77	1.55
Fisher TWO Balanced	7.92	6.41	1.39
Grosvenor Balanced	6.02	4.70	1.24
Kiwi Wealth Balanced	7.92	6.57	1.25
Mercer Balanced	8.35	6.49	1.71
Westpac Balanced	8.62	7.33	1.19

KiwiSaver investors should be wary of the effects of tax, as it has a direct impact on the growth of their retirement nest eggs. However, investors should not select investments solely on the basis of the level of taxation, as that can lead to poor investment decisions.

Assets Under Management

KiwiSaver assets on the Morningstar database grew to NZ\$23.39 billion at 30 September 2014 from NZ\$954.10 million at 30 June 2008, which is a phenomenal growth rate. ANZ and ASB remained the dominant players at 30 September 2014, with a steady 44.0% of KiwiSaver assets between them. AMP retained third spot ahead of Westpac, while Fisher Funds remained in fifth spot. New addition Kiwi Wealth enters the database in sixth spot.

The industry remains highly-concentrated, with the eight largest KiwiSaver providers accounting for 94.90% of assets on our database.

About This Survey

This survey groups KiwiSaver options according to their mix of income and growth assets, or "asset allocation". This is one of the most important decisions to make when saving for retirement. The term "income assets" refers to cash and fixed interest securities that generally produce stable and reliable returns but offer little opportunity for long-term capital growth. Returns from "growth assets" such as property and shares will be erratic — as recent market volatility has demonstrated — but over time have shown greater capacity for increasing in value. The mixture of income and growth assets is the major determinant of potential return and volatility.

Investors may notice differences between the returns published in this survey and those they see elsewhere. There are several possible reasons for this. First, the returns published here are all after fees but before tax. Second, we take the associated tax credit into consideration when calculating and publishing these returns, while some fund managers base their published performance figures on month-end unit prices only.

Morningstar KiwiSaver Report: 30 September 2014

Please note:

- Past performance is not a guide to future performance. This year's best performers can easily be next year's worst.
- Understanding your risk profile, and the mix of growth and income assets is critical.
- Fees are the one constant that will always eat away at your returns. Take a close look at the cost of your KiwiSaver Scheme.

The performance for ASB, AMP, Forsyth Barr and Tower reflects fees that are charged as a percentage of your account balance and paid by cancelling units. Please contact Morningstar if you require clarification. Morningstar requested a (Total Expense Ratio) TER to be provided and calculated by Providers in line with the IOSCO international standard calculation, excluding dollar-based account fees. The dollar-based account or membership fees are payable in addition to the other fees captured in the TER, and are not reflected in the fund's performance. Und. = Undisclosed.* - Performance numbers supplied directly from the provider rather than calculated independently by Morningstar.** - Median rather than a mean. *** - Minimum fee up to \$40/50 depending on option is charged, inclusive of other costs. **** - \$40 fee but \$0 if balance is over \$5,000.
